WHERE PASSION COMES TO BLOOM

Quality in everything we do...

Van den Bos has years of experience in storage, preparation and export of calla tubers. Service and quality are our top priority, which is clearly reflected in our final product. One of our strengths is access to exclusive and semi-exclusive varieties. This allows us to offer you a distinctive range of callas for both cut and pot.

It is our mission to deliver the best quality tubers and thanks to our passionate team we achieve this goal! When a batch is purchased we conduct multiple field inspections. Once the tubers are harvested by the growers and delivered to Van den Bos, our quality team carefully checks each batch. We make sure that the tubers receive proper preparation and are stored at

the correct temperatures. The tubers are under our constant management and care until the moment they are delivered to your door. We love to share our knowledge with you! Our representatives are genuine specialists and our only goal is to support you to make sure you get the best quality callas.

In addition to our corporate office in the Netherlands, we have over 10 Account Managers throughout the world as well as our own Van den Bos locations in the United States, Canada, China and Australia.

Let's grow callas together!

* CUT CALLA

This information is indicated on the results of the VDB test greenhouse. If you would like to have the information personalized on your climate, please contact your sales representative.

Cultivation guidelines pot Calla

Tubers - Two kind of tubers:

- Shoots already on the tuber
- Stored tubers: Must be stored at 9°C (48°F) with a relative humidity level of about 70%

Media to use in pots

- PH value of 5.8-6.5
- High percentage of Coco peat is preferable
- Avoid fine soil structure
- Percentage of bark is preferable in your soil mixture

Planting

- Plant with shoots facing upwards
- 2,5 cm/1 inch potting compost above the tuber

Greenhouse temperatures

- From planting until shoots of 3-5 cm -> 16°C-20°C (60°F-68°F)
- From 6 cm until you see the flowers -> 16°C-24°C (60°F-75°F) during the day
- From 6 cm until you see the flowers -> 13°C-16°C (55°F-60°F) at night
- From flower colouring until delivery -> 16°C-24°C (60°F-75°F) during the day
- From flower colouring until delivery -> 13°C-16°C (55°F-60°F) at night

Watering

- Give after planting sufficient water so potting soil is good moist and cover pots with clear plastic. Remove plastic when first shoots emerge above the soil
- Moderate watering until the leaves unfold and give a drench with Ridomyl gold during the second/third watering
- Pot should not be constantly wet, rather slightly dry

Fertilization

- 800 gram NPK (12-10-28) per m³ mixed through the compost
- Add nutrition during each watering with 1.5-2 EC
- Nutrition like 15-5-30 with extra Magnesium and Iron is a good composition between NPK

Relative Humidity (RH)

- 65-75%
- Avoid humidity drop below 60%

Growth regulation

- Use PGR (paclobutrazol) when needed as a drench
- Concentration is depending on variety
- PGR drench have to take place including 30-50 cc water per pot

Crop protection

- Use a well drained medium
- Scout regular for Aphids, Trips, Rhizoctonia and Phytium
- Active greenhouse climate is needed to avoid stress
- Ventilators can help for sufficient air circulation

Pot size and tubers size

Pot size	In cc	Plant density netto m²	12/14	14/16	16/18	18/20	20/24
9 cm	285 cc	35	x				
11 cm	520 cc	30	x	x			
12 cm	>620 cc	30		x	x		
14 cm	>1000 cc	25			x	x	
17 cm	>2000 cc	20				x	x
19 cm	>3000 cc	15					x
